S-309L. 17 is designed for welding of dissimilar metals such as Stainless steels and carbon steels or stainless steels and low alloy steels

2 .S-309L. 17 is a Rutile-Acid type electrode for dissimilar welding such as stainless steel to carbon steel or low-alloy steels, and for under-layer welding on cladded side groove of cladded stainless steel.
3. S-309L. 17 has a high moisture resistance and good porosity resistance

1. it is mostly effective to proceed with welding. Keeping the arc as short as possible in flat position.
2. Remove dirts such as oil and dust from the groove.
3. Dry the electrode at $350^{\circ} \mathrm{C}\left(662^{\circ} \mathrm{F}\right)$ for 60 minutes before use.
